Common Specifications

Standard Specifications

Valve specifications	Valve construction		Direct operated poppet
	Withstand pressure	MPa	5.0
	Body material		C37
	Seal material		NBR, FKM, EPDM, PTFE
	Enclosure		Dust-tight, Water-jet-proof type (IP65) Note)
	Environment		Location without corrosive or explosive gases
Strainer specifications	Mesh		100
	Material		Stainless steel
Coil specifications	Rated voltage	AC	100 VAC, 200 VAC, 110 VAC, 220 VAC, 230 VAC, 240 VAC, 48 VAC
		DC	24 VDC, 12 VDC
	Allowable voltage fluctuation		±10% of rated voltage
	Allowable leakage voltage	AC (Class B, Built-in full-wave rectifier type)	10% or less of rated voltage
		AC (Class B/H)	20% or less of rated voltage
		DC (Class B only)	2% or less of rated voltage
	Coil insulation type		Class B, Class H

Note) Electrical entry: Grommet with surge voltage suppressor (GS) has a rating of IP40.

Solenoid Coil Specifications

Normally Closed (N.C.)
DC Specification

Model	Power consumption (W)	Temperature rise (C°) Note)
VXK21	4.5	45
VXK22	7	45
VXK23	10.5	60

AC Specification (Class B, Built-in full-wave rectifier type)

Model	Apparent power (VA)*	Temperature rise (C°) Note)
VXK21	7	55
VXK22	9.5	60
VXK23	12	65

∗ There is no difference in the frequency and the inrush and energized apparent power because a rectifying circuit is used in the AC (Class B, Built-in full-wave rectifier type).
Note) Value at ambient temperature of 20°C and when the rated voltage is applied.

AC Specification

All Options (Single Unit)

VXK2☐☐ $^0_2$ ☐☐☐–☐☐–☐☐☐**1**

      ● **Option symbol**

Fluid and application	Option symbol	Seal material	Body/Shading coil material Note 5)	Coil insulation type Note 4)	Remarks
Air	**Nil**	NBR	C37/–	B	Select the built-in full-wave rectifier type for AC spec.
Medium vacuum, Non-leak, Oil-free Note 1)	**V** Note 2)	FKM	C37/–	B	Select the built-in full-wave rectifier type for AC spec.
Water	**Nil**	NBR	C37/Cu	B	
Heated water	**E**	EPDM	C37/Cu	H	
Oil Note 3)	**A**	FKM	C37/Cu	B	
	D			H	
Steam	**S**	PTFE	C37/Cu	H	
Other combinations	**B**	EPDM	C37/Cu	B	
	C	PTFE			

Note 1) The leakage amount (10⁻⁶ Pa·m³/s) of the option "V" is a value when the differential pressure is 0.1 MPa.
Note 2) Option "V" is the oil-free treatment.
Note 3) The dynamic viscosity of the fluid must not exceed 50 mm²/s.
     The special construction of the armature adopted in the built-in full-wave rectifier type gives an improvement in OFF response by providing clearance on the absorbed surface when it is switched ON.
     Select the DC spec. or AC spec. built-in full-wave rectifier type when the dynamic viscosity is higher than water or when the OFF response is prioritized.
Note 4) Coil insulation type Class H: AC spec. only
Note 5) There is no shading coil attached to the DC spec. or AC spec. built-in full-wave rectifier type.

VXK21/22/23 Series

For Air /Single Unit
(Non-leak, Medium vacuum)

⚠ **Fluid: Air**

When you operate the **VXK series** (AC spec.) by air, the built-in full-wave rectifier type is chosen.
- The special construction of the armature reduces abrasion, resulting in a longer service life.
- Noise reduction
  Best suited for medical equipment, low-noise environments, etc.

Model
Refer to the Table (1)
shown below for availability.

Orifice size
Refer to the Table (1)
shown below for availability.

Valve/Body configuration

0	N.C./Single unit
2	N.O./Single unit

Solenoid valve option
Refer to the Table (2)
shown below for availability.

Port size
Refer to the Table (1)
shown below for availability.

Bracket

Nil	None
B	With bracket

∗ Packed in the same container
as the main body.
∗ Refer to the Table (4) when a
bracket is ordered separately.

**Built-in
full-wave
rectifier type**

Suffix

Nil	—
Z	Oil-free

Select nil because the
solenoid valve option "V"
is the oil-free treatment.

Thread type

Nil	Rc
T	NPTF
F	G∗1
N	NPT

∗1 For connection, prepare a
fitting compliant with ISO
16030 and JIS B 8674.

Electrical entry

Rated voltage

1	100 VAC 50/60 Hz	6	12 VDC
2	200 VAC 50/60 Hz	7	240 VAC 50/60 Hz
3	110 VAC 50/60 Hz	8	48 VDC
4	220 VAC 50/60 Hz	J	230 VAC 50/60 Hz
5	24 VDC		

∗ Refer to the Table (3) shown below for availability.

Refer to page 96 for ordering a coil only.

G - Grommet	**C** - Conduit
GS - With grommet surge voltage suppressor	
T - With conduit terminal	**D** - DIN terminal
TS - With conduit terminal and surge voltage suppressor	**DS** - DIN terminal with surge voltage suppressor
TL - With conduit terminal and light	**DL** - DIN terminal with light
TZ - With conduit terminal, surge voltage suppressor and light	**DZ** - DIN terminal with surge voltage suppressor and light
	DO - For DIN terminal (without connector, gasket is included.)

Connector

∗ DIN type is available with class B only.

∗ Refer to the Table (3) for the available combinations between each electrical option
(S, L, Z) and rated voltage.
∗ Option "S", "Z" are not available because a surge voltage suppressor is integrated
into the AC/Class B, built-in full-wave rectifier type as a standard.

NBR, EPDM	0.1 cm³/min or less

CE UK CA

How to Order (Single Unit)

| AC | VXK | 21 | 2 | 0 | | | -01 | | -1 | G | R | 1- |
| DC | VXK | 21 | 2 | 0 | | | -01 | | -5 | G | | 1- |

Model
Refer to the Table (1) shown below for availability.

Orifice size
Refer to the Table (1) shown below for availability.

Valve/Body configuration

| 0 | N.C./Single unit |
| 2 | N.O./Single unit |

Solenoid valve option
Refer to the Table (2) shown below for availability.

Suffix

| Nil | — |
| Z | Oil-free |

Oil-free, AC/Class B: Built-in full-wave rectifier type only. Select the built-in full-wave rectifier type.

Port size
Refer to the Table (1) shown below for availability.

Thread type

Nil	Rc
T	NPTF
F	G*1
N	NPT

*1 For connection, prepare a fitting compliant with ISO 16030 and JIS B 8674.

Rated voltage

1	100 VAC 50/60 Hz	6	12 VDC
2	200 VAC 50/60 Hz	7	240 VAC 50/60 Hz
3	110 VAC 50/60 Hz	8	48 VAC 50/60 Hz
4	220 VAC 50/60 Hz	J	230 VAC 50/60 Hz
5	24 VDC		

∗ Refer to the Table (3) shown below for availability.

Refer to page 96 for ordering a coil only.

Bracket

| Nil | None |
| B | With bracket |

∗ Packed in the same container as the main body.
∗ Refer to the Table (4) when a bracket is ordered separately.

Full-wave rectifier

| Nil | None |
| R | Built-in full-wave rectifier type (Class B only) |

Electrical entry

G - Grommet
GS- With grommet surge voltage suppressor

C- Conduit

T - With conduit terminal
TS - With conduit terminal and surge voltage suppressor
TL - With conduit terminal and light
TZ - With conduit terminal, surge voltage suppressor and light

D - DIN terminal
DS - DIN terminal with surge voltage suppressor
DL - DIN terminal with light
DZ - DIN terminal with surge voltage suppressor and light
DO - For DIN terminal (without connector, gasket is included.)

Connector

∗ DIN type is available with class B only.

∗ Refer to the Table (3) for the available combinations between each electrical option (S, L, Z) and rated voltage.
∗ Option "S", "Z" are not available because a surge voltage suppressor is integrated into the AC/Class B, built-in full-wave rectifier type as a standard.

Note 1) The flow rate characteristics of this product have variations.
When the highly precise flow control is required according to the system to be used, select an orifice diameter 1.3 times larger than that shown above and install a restrictor on the downstream side of the solenoid valve to make the adjustment.
Note 2) Weight of grommet type. Add 10 g for conduit type, 30 g for DIN terminal type, and 60 g for conduit terminal type respectively.
Note 3) Refer to "Glossary of Terms" on page 98 for details on the max. operating pressure differential and the max. system pressure.

VXK21/22/23 Series

For Air, Water, Oil, Steam

Construction: Single Unit

Normally closed (N.C.)
Body material: C37
Normally open (N.O.)
Body material: C37
Component Parts

No.	Description	Material
1	**Body**	C37
2	**Tube assembly** Note 2)	Stainless steel, Cu
3	**Armature assembly**	Stainless steel, PPS, NBR (FKM, EPDM, PTFE)
4	**Return spring**	Stainless steel
5	**Solenoid coil**	—
6	**O-ring**	NBR (FKM, EPDM, PTFE)
7	**Clip**	SK
8	**Nut**	C37
9	**Strainer**	Stainless steel
10	**Plug**	C37
11	**O-ring**	NBR (FKM, EPDM, PTFE)

Note 1) The seal materials shown in ( ) are available depending on the option selected.
Note 2) "Cu" is not available with the DC spec. and AC spec. built-in full-wave rectifier type.

Pressure Terminology

1. Maximum operating pressure differential
The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

2. Minimum operating pressure differential
The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve stably operating.

3. Maximum system pressure
The maximum pressure that can be applied inside the pipelines (line pressure).
(The pressure differential of the solenoid valve portion must be less than the maximum operating pressure differential.)

4. Proof pressure
The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. (value under the prescribed conditions)

5. 100 mesh
The number of meshes over a length of 25.4 mm (1 inch).

Electrical Terminology

1. Apparent power (VA)
Volt-ampere is the product of voltage (V) and current (A).
Power consumption (W): For AC , $W = V \cdot A \cdot \cos\theta$. For DC, $W = V \cdot A$.
Note) $\cos\theta$ shows power factor. $\cos\theta = 0.6$

2. Surge voltage
A high voltage which is momentarily generated by shutting off the power in the shut-off area.

3. Enclosure
A degree of protection defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects".

Verify the degree of protection for each product.

IP – ☐ ☐
• Second characteristic numeral
• First characteristic numeral

● **First Characteristics:**
  Degrees of protection against solid foreign objects

0	Non-protected
1	Protected against solid foreign objects of 50 mm ø and greater
2	Protected against solid foreign objects of 12 mm ø and greater
3	Protected against solid foreign objects of 2.5 mm ø and greater
4	Protected against solid foreign objects of 1.0 mm ø and greater
5	Dust-protected
6	Dusttight

● **Second Characteristics:**
  Degrees of protection against water

0	Non-protected	—
1	Protected against vertically falling water drops	Dripproof type 1
2	Protected against vertically falling water drops when enclosure tilted up to 15°	Dripproof type 2
3	Protected against rainfall when enclosure tilted up to 60°	Rainproof type
4	Protected against splashing water	Splashproof type
5	Protected against water jets	Low jetproof type
6	Protected against powerful water jets	Strong jetproof type
7	Protected against the effects of temporary immersion in water	Immersible type
8	Protected against the effects of continuous immersion in water	Submersible type

Example) IP65: Dusttight, Low jetproof type
"Low jetproof type" means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.

Others

1. Material
NBR: Nitrile rubber
FKM: Fluororubber
EPDM: Ethylene propylene rubber
PTFE: Polytetrafluoroethylene resin

2. Oil-free treatment
The degreasing and washing of wetted parts.

3. Symbol
In the symbol (☐☐☐) Port 1 (IN) and Port 2 (OUT) are shown in a blocked condition (⊥), but it is not possible to use the valve in cases of reverse pressure, where the Port 2 pressure is higher than the Port 1 pressure.

1. Indication of flow rate characteristics

The flow rate characteristics in equipment such as a solenoid valve, etc. are indicated in their specifications as shown in Table (1).

Table (1) Indication of Flow Rate Characteristics

Corresponding equipment	Indication by international standard	Other indications	Conformed standard
Pneumatic equipment	C, b	—	ISO 6358: 1989 JIS B 8390: 2000
	—	S	JIS B 8390: 2000 Equipment: JIS B 8379, 8381-1, 8381-2
		Cv	ANSI/(NFPA)T3.21.3 R1-2008
Process fluid control equipment	Kv	—	IEC60534-1: 2005 IEC60534-2-3: 1997 JIS B 2005-1: 2012
	—	Cv	JIS B 2005-2-3: 2004 Equipment: JIS B 8471, 8472, 8473

2. Pneumatic equipment

2.1 Indication according to the international standards

(1) Conformed standard

ISO 6358: 1989 : **Pneumatic fluid power—Components using compressible fluids—**
Determination of flow rate characteristics
JIS B 8390: 2000 : **Pneumatic fluid power—Components using compressible fluids—**
How to test flow rate characteristics

(2) Definition of flow rate characteristics

The flow rate characteristics are indicated as a result of a comparison between sonic conductance C and critical pressure ratio b.

Sonic conductance C : Value which divides the passing mass flow rate of an equipment in a choked flow condition by the product of the upstream absolute pressure and the density in a standard condition.

Critical pressure ratio b : Pressure ratio (downstream pressure/upstream pressure) which will turn to a choked flow when the value is smaller than this ratio.

Choked flow : The flow in which the upstream pressure is higher than the downstream pressure and where sonic speed in a certain part of an equipment is reached.
Gaseous mass flow rate is in proportion to the upstream pressure and not dependent on the downstream pressure.

Subsonic flow : Flow greater than the critical pressure ratio

Standard condition : Air in a temperature state of 20°C, absolute pressure 0.1 MPa (= 100 kPa = 1 bar), relative humidity 65%.
It is stipulated by adding the "(ANR)" after the unit depicting air volume.
(standard reference atmosphere)
Conformed standard: ISO 8778: 1990 Pneumatic fluid power—Standard reference atmosphere, JIS B 8393: 2000: Pneumatic fluid power—Standard reference atmosphere

(3) Formula for flow rate

It is described by the practical units as following.

When

$\dfrac{P_2 + 0.1}{P_1 + 0.1} \leq b$, **choked flow**

$$Q = 600 \times C \, (P_1 + 0.1)\sqrt{\frac{293}{273 + T}} \quad \text{..(1)}$$

When

$\dfrac{P_2 + 0.1}{P_1 + 0.1} > b$, **subsonic flow**

$$Q = 600 \times C \, (P_1 + 0.1)\sqrt{1 - \left[\frac{\dfrac{P_2 + 0.1}{P_1 + 0.1} - b}{1 - b}\right]^2}\sqrt{\frac{293}{273 + T}} \quad \text{................................(2)}$$

Q : Air flow rate [L/min (ANR)]
C : Sonic conductance [dm³/(s·bar)], dm³ (Cubic decimeter) of SI = L (liter).
b : Critical pressure ratio [—]
P_1 : Upstream pressure [MPa]
P_2 : Downstream pressure [MPa]
T : Temperature [°C]
Note) Formula of subsonic flow is the elliptic analogous curve.
Flow rate characteristics are shown in Graph (1) For details, please use the calculation software available from SMC website.

Example)
Obtain the air flow rate for P_1 = 0.4 [MPa], P_2 = 0.3 [MPa], T = 20 [°C] when a solenoid valve is performed in
C = 2 [dm³/(s·bar)] and b = 0.3.

According to formula 1, the maximum flow rate = $600 \times 2 \times (0.4 + 0.1) \times \sqrt{\dfrac{293}{273 + 20}} = 600$ [L/min (ANR)]

Pressure ratio = $\dfrac{0.3 + 0.1}{0.4 + 0.1} = 0.8$

Based on Graph (1), it is going to be 0.7 if it is read by the pressure ratio as 0.8 and the flow ratio to be b = 0.3.
Hence, flow rate = Max. flow x flow ratio = 600 x 0.7 = 420 [L/min (ANR)]
Graph (1) Flow rate characteristics

(4) Test method
Attach a test equipment with the test circuit shown in Fig. (1) while maintaining the upstream pressure to a certain level which does not go below 0.3 MPa. Next, measure the maximum flow to be saturated in the first place, then measure this flow rate at 80%, 60%, 40%, 20% and the upstream and downstream pressure. And then, obtain the sonic conductance C from this maximum flow rate. In addition, calculate b using each data of others and the subsonic flow formula, and then obtain the critical pressure ratio b from that average.
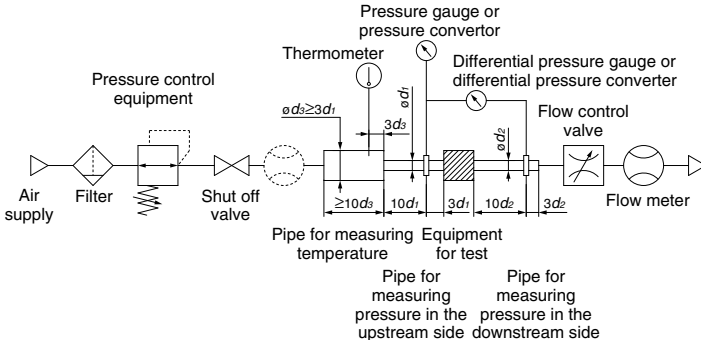

Fig. (1) Test circuit based on ISO 6358: 1989, JIS B 8390: 2000

2.2 Effective area *S*

(1) Conformed standard
JIS B 8390: 2000: Pneumatic fluid power—Components using compressible fluids—Determination of flow rate characteristics
Equipment standards: JIS B 8373: Solenoid valve for pneumatics
JIS B 8379: Silencer for pneumatics
JIS B 8381-1: Fittings for pneumatics—Part 1: Push-in fittings for thermoplastic resin tubing
JIS B 8381-2: Fittings for pneumatics—Part 2: Compression fittings for thermoplastic resin tubing

(2) Definition of flow rate characteristics
Effective area *S* : The cross-sectional area having an ideal throttle without friction deduced from the calculation of the pressure changes inside an air tank or without reduced flow when discharging the compressed air in a choked flow, from an equipment attached to the air tank. This is the same concept representing the "easy to run through" as sonic conductance *C*.

(3) Formula for flow rate
When

$$\frac{P_2 + 0.1}{P_1 + 0.1} \quad 0.5, \text{ choked flow}$$

$$Q = 120 \times S (P_1 + 0.1)\sqrt{\frac{293}{273 + T}} \quad \text{...(3)}$$

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} > 0.5, \text{ subsonic flow}$$

$$Q = 240 \times S \sqrt{(P_2 + 0.1)(P_1 - P_2)} \sqrt{\frac{293}{273 + T}} \quad \text{...(4)}$$

Conversion with sonic conductance *C*:

$$S = 5.0 \times C \quad \text{...(5)}$$

Q : Air flow rate[L/min(ANR)]
S : Effective area [mm^2]
P$_1$: Upstream pressure [MPa]
P$_2$: Downstream pressure [MPa]
T : Temperature [°C]
Note) Formula for subsonic flow (4) is only applicable when the critical pressure ratio *b* is the unknown equipment. In the formula (2) by the sonic conductance *C*, it is the same formula as when *b* = 0.5.

(4) Test method
Attach a test equipment with the test circuit shown in Fig. (2) in order to discharge air into the atmosphere until the pressure inside the air tank goes down to 0.25 MPa (0.2 MPa) from an air tank filled with the compressed air at a certain pressure level (0.5 MPa) which does not go below 0.6 MPa. At this time, measure the discharging time and the residual pressure inside the air tank which had been left until it turned to be the normal values to determine the effective area *S*, using the following formula. The volume of an air tank should be selected within the specified range by corresponding to the effective area of an equipment for test. In the case of JIS B 8379, the pressure values are in parentheses and the coefficient of the formula is 12.9.

$$S = 12.1 \frac{V}{t} \log_{10}\left(\frac{P_s + 0.1}{P + 0.1}\right)\sqrt{\frac{293}{T}} \quad \text{.................(6)}$$

S : Effective area [mm^2]
V : Air tank capacity [L]
t : Discharging time [s]
P$_s$: Pressure inside air tank before discharging [MPa]
P : Residual pressure inside air tank after discharging [MPa]
T : Temperature inside air tank before discharging [K]

Fig. (2) Test circuit based on JIS B 8390: 2000

2.3 Flow coefficient Cv factor

The United States Standard ANSI/(NFPA)T3.21.3: R1-2008R: Pneumatic fluid power—Flow rating test procedure and reporting method for fixed orifice components

This standard defines the Cv factor of the flow coefficient by the following formula that is based on the test conducted by the test circuit analogous to ISO 6358.

$$Cv = \frac{Q}{114.5\sqrt{\dfrac{\Delta P\,(P_2 + Pa)}{T_1}}} \quad \cdots\cdots (7)$$

ΔP : Pressure drop between the static pressure tapping ports [bar]
P_1 : Pressure of the upstream tapping port [bar gauge]
P_2 : Pressure of the downstream tapping port [bar gauge]: $P_2 = P_1 - \Delta P$
Q : Flow rate [L/s standard condition]
Pa : Atmospheric pressure [bar absolute]
T_1 : Upstream absolute temperature [K]
Test conditions are < $P_1 + Pa$ = 6.5 ± 0.2 bar absolute, T_1 = 297 ± 5K, 0.07 bar ≤ ΔP 0.14 bar.
This is the same concept as effective area A which ISO 6358 stipulates as being applicable only when the pressure drop is smaller than the upstream pressure and the compression of air does not become a problem.

3. Process fluid control equipment

(1) Conformed standard
IEC60534-1: 2005: Industrial-process control valves. Part 1: control valve terminology and general considerations
IEC60534-2-3: 1997: Industrial-process control valves. Part 2: Flow capacity, Section Three- Test procedures
JIS B 2005-1: 2012: Industrial-process control valves – Part 1: Control valve terminology and general considerations
JIS B 2005-2-3: 2004: Industrial-process control valves – Part 2: Flow capacity – Section 3: Test procedures
Equipment standards: JIS B 8471: Solenoid valve for water
JIS B 8472: Solenoid valve for steam
JIS B 8473: Solenoid valve for fuel oil

(2) Definition of flow rate characteristics

Kv factor: Value of the clean water flow rate represented by m³/h that runs through the valve (equipment for test) at 5 to 40°C, when the pressure difference is 1 x 10⁵ Pa (1 bar). It is calculated using the following formula:

$$Kv = Q\sqrt{\frac{1 \times 10^5}{\Delta P} \cdot \frac{\rho}{1000}} \quad \cdots\cdots (8)$$

Kv: Flow coefficient [m³/h]
Q : Flow rate [m³/h]
ΔP : Pressure difference [Pa]
ρ : Density of fluid [kg/m³]

(3) Formula of flow rate
It is described by the practical units. Also, the flow rate characteristics are shown in Graph (2).
In the case of liquid:

$$Q = 53Kv\sqrt{\frac{\Delta P}{G}} \quad \cdots\cdots (9)$$

Q : Flow rate [L/min]
Kv: Flow coefficient [m³/h]
ΔP : Pressure difference [MPa]
G : Relative density [water = 1]
In the case of saturated aqueous vapor:

$$Q = 232Kv\sqrt{\Delta P(P_2 + 0.1)} \quad \cdots\cdots (10)$$

Q : Flow rate [kg/h]
Kv: Flow coefficient [m³/h]
ΔP : Pressure difference [MPa]
P_1 : Upstream pressure [MPa]: $\Delta P = P_1 - P_2$
P_2 : Downstream pressure [MPa]

Conversion of flow coefficient:

$$\textbf{\textit{Kv}} = 0.865\ \textbf{\textit{Cv}} \quad \text{..(11)}$$

Here,

Cv factor: Value of the clean water flow rate represented by US gal/min that runs through the valve at 40 to 100°F, when the pressure difference is 1 lbf/in² (psi)

Value is different from **Kv** and **Cv** factors for pneumatic purpose due to different test method.

(4) Test method

Connect the equipment for the test to the test circuit shown in Fig. (3), and run water at 5 to 40°C. Then, measure the flow rate with a pressure difference where vaporization does not occur in a turbulent flow (pressure difference of 0.035 MPa to 0.075 MPa when the inlet pressure is within 0.15 MPa to 0.6 MPa). However, as the turbulent flow is definitely caused, the pressure difference needs to be set with a large enough difference so that the Reynolds number does not fall below 1 x 105, and the inlet pressure needs to be set slightly higher to prevent vaporization of the liquid. Substitute the measurement results in formula (8) to calculate **Kv**.
Fig. (3) Test circuit based on IEC60534-2-3, JIS B 2005-2-3
Graph (2) Flow rate characteristics

Example 1)

Obtain the pressure difference when water [15 L/min] runs through the solenoid valve with a **Kv** = 1.5 m³/h. As the flow rate when **Kv** = 1 is calculated as the formula: $Q_0 = 15 \times 1/1.5 = 10$ [L/min], read off ΔP when Q_0 is 10 [L/min] in Graph (2). The reading is 0.036 [MPa].

Example 2)

Obtain the saturated steam flow rate when P_1 = 0.8 [MPa] and ΔP = 0.008 [MPa] with a solenoid valve with a **Kv** = 0.05 [m³/h]. Read off Q_0 when P_1 is 0.8 and ΔP is 0.008 in Graph (2), the reading is 20 kg/h. Therefore, the flow rate is calculated as the formula: $Q = 0.05/1 \times 20 = 1$ [kg/h].

VXK21/22/23 *Series*
Flow Rate Characteristics
Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 99 to 103.

Air
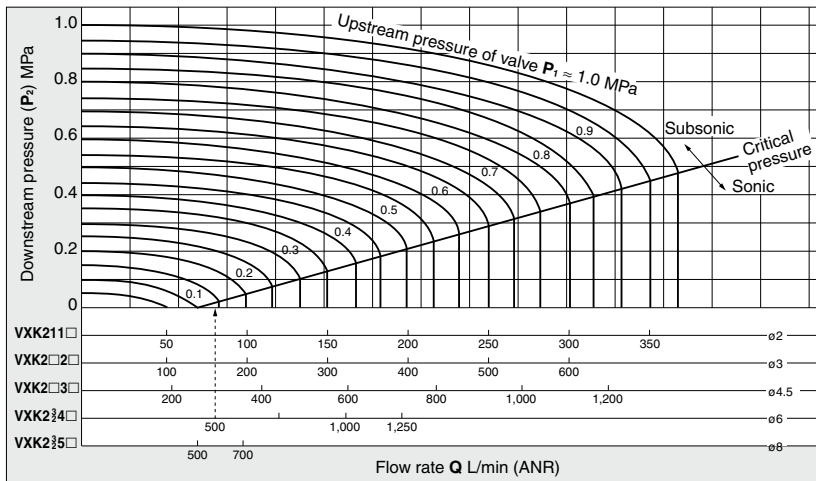

How to read the graph
The sonic range pressure to generate a flow rate of 500 L/min (ANR) is
P_1 = 0.14 MPa for a ø6 orifice (VXK2$\frac{3}{2}$4□) and
P_1 = 0.3 MPa for a ø4.5 orifice (VX2□3□).

Saturated Steam
( ): Saturated steam holding heat (kcal/kg)   ( ): Saturation temperature (°C)

How to read the graph
The sonic range pressure to generate a flow rate of 15 kg/h is
P_1 = 0.15 MPa for ø4.5 orifice (VXK2□3□S), P_1 = 0.37 MPa for ø3 orifice (VXK2□2□S), and
P_1 = 0.82 MPa for ø2 orifice (VXK211□S). The holding heat slightly differs depending on the pressure P_1, but at 15 kg/h it is approx. 9700 kcal/h.

SMC

Water

Pressure differential △P = (P₁ – P₂) MPa
How to read the graph
When a water flow of 2 L/min is generated, △P = 0.017 MPa for a valve with ø3 orifice (VXK212□, 222□, 232□).

Specific Product Precautions 1
Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Design

⚠ Warning

1. Cannot be used as an emergency shutoff valve etc.
The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. Extended periods of continuous energization
The solenoid coil will generate heat when continuously energized. Avoid using in a tightly shut container. Install it in a well ventilated area. Furthermore, do not touch it while it is being energized or right after it is energized.

3. Closed liquid circuit
In a closed circuit, when liquid is static, pressure could rise due to changes in temperature. This pressure rise could cause malfunction and damage to components such as valves. To prevent this, install a relief valve in the system.

4. Actuator drive
When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent potential danger caused by actuator operation.

5. Pressure (including vacuum) holding
It is not usable for an application such as holding the pressure (including vacuum) inside of a pressure vessel because air leakage is entailed in a valve.

6. When the conduit type is used as equivalent to an IP65 enclosure, install a wiring conduit etc.

7. When an impact, such as water hammer etc., caused by the rapid pressure fluctuation is applied, the solenoid valve may be damaged. Give an attention to it.

Selection

⚠ Warning

1. Fluid

1) Type of fluid
Before using a fluid, check whether it is compatible with the materials of each model by referring to the fluids listed in this catalog. Use a fluid with a kinematic viscosity of 50 mm^2/s or less.

2) Flammable oil, Gas
Do not use the product with combustion-supporting or flammable fluids.

3) Corrosive gas
Cannot be used since it will lead to cracks by stress corrosion or result in other incidents.

4) Use an oil-free specification when any oily particle must not enter the passage.

5) Applicable fluid on the list may not be used depending on the operating condition. Give adequate confirmation, and then determine a model, just because the compatibility list shows the general case.

Selection

⚠ Warning

2. Fluid quality

<Air>

1) Use clean air.
Do not use compressed air that contains chemicals, synthetic oils including organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

2) Install an aftercooler or air dryer, etc.
Compressed air that contains excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler or air dryer, etc.

3) If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves.
If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Refer to Best Pneumatics No.5 for further details on compressed air quality.

<Vacuum>
Please be aware that there is a range of pressure that can be used.
Vacuum piping direction: if the system uses a vacuum pump, we ask that you install the vacuum pump on the secondary side.
Please replace the valve after operating the device approximately 300,000 times.

SMC

VXK21/22/23 *Series*
Specific Product Precautions 2

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Selection

⚠️Warning

\<Water\>
The supply water includes materials that generate hard sediment or sludge such as calcium and magnesium. Since such scale and sludge can cause the valve to malfunction, install water softening equipment to remove these substances.

Tap water pressure:
The water pressure for tap water is normally 0.4 MPa or less. However, in places like a high-rise building, the pressure may be 1.0 MPa. When selecting tap water, be careful of the maximum operating pressure differential.

\<Oil\>
Generally, FKM is used as seal material, as it is resistant to oil. The resistance of the seal material may deteriorate depending on the type of oil, manufacturer or additives. Check the resistance before using. The kinematic viscosity must not exceed 50 mm^2/s.

\<Steam\>
The supply water to a boiler includes materials that create a hard sediment or sludge such as calcium and magnesium. Sediment and sludge from steam can cause the valve to not operate properly. Install a water softening device, which removes these materials. Do not use operation steam which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as these can cause damage or deterioration.

3. Ambient environment
Use within the operable ambient temperature range. Check the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

4. Countermeasures against static electricity
Take measures to prevent static electricity since some fluids can cause static electricity.

5. Low temperature operation
1) The valve can be used in an ambient temperature of between –20°C. However, take measures to prevent freezing or solidification of impurities, etc.
2) When using valves for water application in cold climates, take appropriate countermeasures to prevent the water from freezing in tubing after cutting the water supply from the pump, by draining the water etc. When warming by a heater etc., be careful not to expose the coil portion to a heater. Installation of a dryer, heat retaining of the body is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, and the high flow runs.

Selection

⚠️Caution

1. Leakage voltage
When operating the solenoid valve with the controller, take appropriate measures so that the leakage current does not exceed the allowable leakage voltage of the product.
Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.
AC coil: 5% or less of rated voltage
DC coil: 2% or less of rated voltage

2. Selecting model
Material depends on fluid. Select optimal models for the fluid.

3. When the fluid is oil.
The kinematic viscosity must not exceed 50 mm^2/s.

Mounting

⚠️Warning

1. If air leakage increases or equipment does not operate properly, stop operation.
After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

2. Do not apply external force to the coil section.
When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.

3. Mount a valve with its coil position upward, not downward.
When mounting a valve with its coil positioned downward, foreign objects in the fluid will adhere to the iron core leading to a malfunction. Especially for strict leakage control, such as with vacuum applications and non-leak specifications, the coil must be positioned upward.

4. Do not warm the coil assembly with a heat insulator etc.
Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the coil to burn out.

5. Secure with the mounting holes firmly, except in the case of steel piping and copper fittings.

6. Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.

7. Painting and coating
Warnings or specifications printed or labeled on the product should not be erased, removed or covered up.

**Replacement of Solenoid Coil**

N.C.

Clip

Solenoid coil

①

Pull out the clip horizontally in direction ①.
∗ When doing this, do not apply twisting or torsion to the clip. Otherwise, the clip may be deformed. If the clip is deformed by mistake, replace it with a new one.

Name plate

②

The removal of the clip will make it possible to remove the coil in direction ②.

③

After replacement of the coil, attach the name plate so that its printed side is facing upwards, and press the clip horizontally in direction ③.

N.O.

E stop ring

Solenoid coil

①
Remove the E stop ring in direction ①.

Collar

Name plate

②

Wave washer

The removal of the E stop ring will make it possible to remove the coil in direction ②.

③

After replacement of the coil, attach the name plate so that its printed side is facing upwards, and mount the collar, and then press the E stop ring horizontally in direction ③.

⚠ Warning

1. **When replacing the solenoid coil, turn off the power supply.**
2. **Be careful for possible high temperature of the solenoid coil due to the fluid temperature and operating conditions.**
3. **Check the type of the solenoid coil (size, rated voltage, voltage specification, insulation specification).**
   ∗ Replacement of solenoid coil
   • Cannot be changed between DC and AC.
   • Can be changed between DC and AC (built-in full-wave rectifier type).
   • Can be changed from DC to DC.
   • Can be changed from AC to AC.

Specific Product Precautions 4

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Replacement of Strainer

⚠ Warning

1. **The valve will reach high temperatures from high temperature fluids such as steam. Confirm that the valve has cooled sufficiently before performing works.**

   If touched inadvertently, there is a danger of being burned.

2. **Shut off the fluid supply and release the fluid pressure in the system.**

3. **Shut off the power supply.**

1) **Turn and remove the plug (width across flats of 27 mm).**

2) **Remove the strainer, and clean or replace it.**

3) **Mount the O-ring on the plug and insert the strainer to the end of the plug.**

4) **Screw the plug into the body.**
   (Recommended tightening torque: 23 to 27 N·m)

Strainer

O-ring

Plug
Piping

⚠ Warning

1. **During use, deterioration of the tube or damage to the fittings could cause tubes to come loose from their fittings and thrash about.**

   To prevent uncontrolled tube movement, install protective covers or fasten tubes securely in place.

2. **For piping the tube, fix the product securely using the mounting holes so that the product is not in the air.**

⚠ Caution

1. **Preparation before piping**

   Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe. Avoid pulling, compressing, or bending the valve body when piping.

Piping

⚠ Caution

2. **Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.**

3. **Always tighten threads with the proper tightening torque.**

   When using steel piping, tighten with the proper tightening torque shown below.
   Lower tightening torque will lead into fluid leakage.

Tightening Torque for Piping

| Thread size	Proper tightening torque (N·m)
Rc1/8	7 to 9
Rc1/4	12 to 14
Rc3/8	22 to 24

4. **Connection of piping to products**

   When connecting piping to a product, avoid mistakes regarding the supply port etc.

5. **Winding of sealant tape**

   When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve.
   Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

   Winding direction

   Sealant tape

   Expose approx. 2 threads
6. **In applications such as vacuum and non-leak specifications, use caution specifically against the contamination of foreign objects or airtightness of the fittings.**

Wiring

⚠ Caution

1. **As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm^2 for wiring.**
   Furthermore, do not allow excessive force to be applied to the lines.

2. **Use electrical circuits which do not generate chattering in their contacts.**

3. **Use voltage which is within ±10% of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within ±5% of the rated value. The voltage drop is the value in the lead wire section connecting the coil.**

4. **When a surge from the solenoid affects the electrical circuitry, install a surge voltage suppressor etc., in parallel with the solenoid. Or, adopt an option that comes with the surge voltage protection circuit. (However, a surge voltage occurs even if the surge voltage protection circuit is used.)**

Specific Product Precautions 5

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Operating Environment

⚠ Warning

1. **Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water steam, or where there is direct contact with any of these.**
2. **Do not use in explosive atmospheres.**
3. **Do not use in locations subject to vibration or impact.**
4. **Do not use in locations where radiated heat will be received from nearby heat sources.**
5. **Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.**

Maintenance

⚠ Warning

1. **Removing the product**
   The valve will reach a high temperature when used with high temperature fluids. Confirm that the valve temperature has dropped sufficiently before performing work. If touched inadvertently, there is a danger of being burned.
   1) Shut off the fluid supply and release the fluid pressure in the system.
   2) Shut off the power supply.
   3) Dismount the product.
2. **Low frequency operation**
   Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

⚠ Caution

1. **Strainers**
   1) Be careful regarding clogging of strainers.
   2) Clean strainers when the pressure drop reaches 0.1 MPa.
2. **Lubrication**
   When using after lubricating, never forget to lubricate continuously.
3. **Storage**
   In case of long term storage after use, thoroughly remove all moisture to prevent rust and deterioration of rubber materials etc.
4. **Exhaust the drainage from an air filter periodically.**

Operating Precautions

⚠ Warning

1. **If there is a possibility of reverse pressure being applied to the valve, take countermeasures such as mounting a check valve on the downstream side of the valve.**
2. **When problems are caused by a water hammer, install water hammer relief equipment (accumulator etc.), or use an SMC water hammer relief valve (VXR series).**
Electrical Connections
