

Rotary Actuated Air Gripper

MHR2, MDHR2/MHR3, MDHR3

2-finger type: Size 10, 15, 20, 30/ 3-finger type: Size 10, 15

High Precision - Repeatability ± 0.01 mm

Parallel opening and closing mechanism utilizing a cross roller guide produces smooth operation without play, with high precision and long life.

Low Profile

Using rotary actuators in the part of actuating portion enables a design compact.

Universal mounting

MDHR2

MDHR3

- Possible to mount solid state switch with indicator light D-M9. Easy to locate switch to optimum set point.

High rigidity

Fingers operate smoothly as the holder maintains the guide from the outside and prevents finger displacement.

Applicable for Clean Series.

Refer to the [Web Catalog](#) for details.

Note 1) Refer to page 646 "Effective Gripping Force" for details of Gripping force at each gripping point. Value of effective gripping force is measured at the middle of opening/closing stroke.

Note 2) () Value shows MDHR weight, but it does not include auto switch weight.

Note 3) This product should be used without lubrication. If it is lubricated, it could lead to sticking or slipping.

When the finger opening/closing speed is set as the total stroke of 0.2 seconds or more, it may cause the product to stick or completely stop its movement.

Gripping Point

- Workpiece gripping point should be within the gripping point range: The range shown for each operating pressure given in the graphs to the right.
- When the gripping point distance becomes large, the finger attachment applies an excessively large load to the finger sliding section, causing excessive play of the fingers and possibly leading to premature failure.

External grip

L: Distance to the gripping point
H: Overhang distance

Internal grip

Limitation of Gripping: External Grip/Internal Grip

MHR2/MDHR2 Series

Effective Gripping Force

Guidelines for the selection of the gripper with respect to workpiece mass

- Although conditions differ according to the workpiece shape and the coefficient of friction between the attachments and the workpiece, select a model that can provide a gripping force of 10 to 20 times the workpiece mass, or more.
- If high acceleration, deceleration or impact forces are encountered during motion a further margin of safety should be considered.

External grip

Internal grip

L: Gripping point length (mm)

• Indication of effective gripping force

The effective gripping force shown in the graphs to the right is expressed as F , which is the thrust of one finger, when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

Gripping Point

External grip

Internal grip

Limitation of Gripping: External Grip/Internal Grip

• Workpiece gripping point should be within the gripping point range: L shown below, by operating pressure.

• When the gripping point distance becomes large, the finger attachment applies an excessively large load to the finger sliding section, causing excessive play of the fingers and possibly leading to premature failure.

MHR3-10R/MDHR3-10□

MHR3-15R/MDHR3-15□

Effective Gripping Force

Guidelines for the selection of the gripper with respect to workpiece mass

- Selection of the correct model depends upon the workpiece mass, the coefficient of friction between the finger attachment and the component, and their respective configurations. A model should be selected with a gripping force of 7 to 14 times that of the workpiece mass.
- If high acceleration, deceleration or impact forces are encountered during motion, a further margin of safety should be considered.

External grip

Internal grip

• Indication of effective gripping force

The effective gripping force shown in the graphs to the right is expressed as F_1 , which is the thrust of one finger, when three fingers and attachments are in full contact with the workpiece as shown in the figure to the right.

Auto Switch Installation Examples and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions.

1) Detection when Gripping Exterior of Workpiece/Auto Switch Mounted from Direction A

Detection example		1. Confirmation of fingers in reset position	2. Confirmation of workpiece held	3. Confirmation of workpiece released
Position to be detected		Position of fingers fully opened 	Position when gripping a workpiece 	Position of fingers fully closed 
Operation of auto switch		Auto switch turned ON when fingers return. (Light ON)	Auto switch turned ON when gripping a workpiece. (Light ON)	When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light ON)
Detection combinations	One auto switch + One position, any of ①, ② and ③ can be detected.	●	●	●
	Two auto switches + Two positions of ①, ② and ③ can be detected.	A	●	—
		B	—	●
C	●	—	●	
How to determine auto switch installation position		Step 1) Fully open the fingers. 	Step 1) Position fingers for gripping a workpiece. 	Step 1) Fully close the fingers. 
At no pressure or low pressure, connect the auto switch to a power supply, and follow the directions.		In the case of mounting auto switch from A direction Step 2) Insert the auto switch into the auto switch installation groove from direction A. 		
		Step 3) Slide the auto switch in the direction of the arrow until the light illuminates and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates. Position where light turns ON  0.3 to 0.5mm Position to be secured 	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates.  Step 4) Slide the auto switch in the direction of the arrow until the indicator light goes out.  Step 5) Move the auto switch in the opposite direction, and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates. Position where light turns ON  0.3 to 0.5 mm Position to be secured 	

Note 1) It is recommended that gripping of a workpiece be performed close to the center of the finger stroke.

Note 2) When holding a workpiece close at the end of open/close stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

2) Detection when Gripping Exterior of Workpiece/Auto Switch Mounted from Direction B

Detection example		1. Confirmation of fingers in reset position	2. Confirmation of workpiece held	3. Confirmation of workpiece released
Position to be detected		Position of fingers fully opened 	Position when gripping a workpiece 	Position of fingers fully closed 
Operation of auto switch		Auto switch turned ON when fingers return. (Light ON)	Auto switch turned ON when gripping a workpiece. (Light ON)	When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light ON)
Detection combinations	One auto switch <small>* One position, any of ①, ② and ③ can be detected.</small>			
	Two auto switches <small>* Two positions of ①, ② and ③ can be detected.</small>	A 	A 	—
	Pattern	B 	B 	C 
How to determine auto switch installation position		Step 1) Fully open the fingers. 	Step 1) Position fingers for gripping a workpiece. 	Step 1) Fully close the fingers. 
At no pressure or low pressure, connect the auto switch to a power supply, and follow the directions.		In the case of mounting auto switch from B direction Step 2) Insert the auto switch into the auto switch installation groove from direction B. <div style="text-align: center; margin-top: 10px;">  </div>		
		Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates. <div style="text-align: center; margin-top: 10px;">  </div>	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates. Move the switch an additional 0.3 to 0.5 mm in the direction of the arrow and fasten it. <div style="text-align: center; margin-top: 10px;">  <p style="text-align: center;">Position where light turns ON</p> </div> <div style="text-align: center; margin-top: 10px;">  <p style="text-align: center;">0.3 to 0.5 mm</p> <p style="text-align: center;">Position to be secured</p> </div>	
		Step 4) Slide the auto switch in the direction of the arrow until the indicator light goes out. <div style="text-align: center; margin-top: 10px;">  </div>		
		Step 5) Move the auto switch in the opposite direction and fasten it at a position 0.3 to 0.5 mm beyond the position where the indicator light illuminates. <div style="text-align: center; margin-top: 10px;">  <p style="text-align: center;">Position where light turns ON</p> </div> <div style="text-align: center; margin-top: 10px;">  <p style="text-align: center;">0.3 to 0.5 mm</p> <p style="text-align: center;">Position to be secured</p> </div>		

Note 1) It is recommended that gripping of a workpiece be performed close to the center of the finger stroke.

Note 2) When holding a workpiece close at the end of open/close stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

MDHR2/MDHR3 Series

Auto Switch Installation Examples and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions.

3) Detection when Gripping Interior of Workpiece/Auto Switch Mounted from Direction A

Step 5) Move the auto switch in the opposite direction, and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates.		Step 5) Move the auto switch in the opposite direction, and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates. 		
Position where light turns ON  Position to be secured  0.3 to 0.5 mm		Position where light turns ON  Position to be secured  0.3 to 0.5 mm		

Note 1) It is recommended that gripping of a workpiece be performed close to the center of the finger stroke.

Note 2) When holding a workpiece close at the end of open/close stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

MHR2/MDHR2 Series

Auto Switch Mounting

To set the auto switch, insert the auto switch into the installation groove of the gripper from the direction indicated in the following drawing. After setting the position, tighten the attached auto switch mounting set screw with a flat head watchmaker's screwdriver.

Note) Use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm to tighten the auto switch mounting screw. Also, tighten with a torque of about 0.05 to 0.15 N·m, or about 0.05 to 0.10 N·m for D-M9□A(V).

Auto Switch Hysteresis

Please refer to the table as a guide when setting auto switch positions.

Model	Hysteresis (Max. value) (mm)
MDHR2-10	0.3
MDHR2-15	0.2
MDHR2-20	0.6
MDHR2-30	0.3

MDHR2

Protrusion of Auto Switch from Edge of Body

The maximum protrusion of an auto switch (when fingers are fully open) from the edge of the body is shown in the table below. Use the table as a guideline for mounting.

MDHR2-10, 15

Auto switches of D-M9N, D-M9P, D-M9B, and D-M9□A are used.

Auto switches of D-M9NV, D-M9PV, D-M9BV, and D-M9□AV are used.

Max. Protrusion of Auto Switch from Edge of Body: L, H (mm)

Auto switch model		Auto switch model			
		D-M9□ D-M9□W	D-M9□A	D-M9□V M9□WV	D-M9□AV
Air gripper model	L	2.6	4.6	0.6	2.6
	H	—	—	7	6.8
MDHR2-15	L	—	—	—	—
	H	—	—	7	6.8

MDHR2-20, 30

Auto switches of D-M9NV, D-M9PV, D-M9BV, and D-M9□AV are used.

Max. Protrusion of Auto Switch from Edge of Body: H (mm)

Auto switch model		Auto switch model	
		D-M9□V M9□WV	D-M9□AV
Air gripper model	L	7	6.8
	H	7	6.8

The auto switch will not protrude in the case of D-M9□.

Auto Switch Mounting

To set the auto switch, insert the auto switch into the installation groove of the gripper from the direction indicated in the following drawing. After setting the position, tighten the attached auto switch mounting set screw with a flat head watchmaker's screwdriver.

Note) Use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm to tighten the auto switch mounting screw. Also, tighten with a torque of about 0.05 to 0.15 N·m, or about 0.05 to 0.10 N·m for D-M9□(V).

Auto Switch Hysteresis

Please refer to the table as a guide when setting auto switch positions.

Model	Hysteresis (Max.value) (mm)
MDHR3-10	0.2
MDHR3-15	0.5

MDHR3

Protrusion of Auto Switch from Edge of Body

The maximum protrusion of an auto switch (when fingers are fully open) from the edge of the body is shown in the table below. Use the table as a guideline for mounting.

MDHR3-10

When auto switches of D-M9□ and D-M9□A are used.

When auto switches of D-M9□V and D-M9□AV are used.

MDHR3-15

When auto switches of D-M9□V and D-M9□AV are used.

Max. Protrusion of Auto Switch from Edge of Body: L, H

(mm)

Auto switch model	D-M9□ D-M9□W	D-M9□A	D-M9□V M9□VV	D-M9□AV
L	—	—	—	—
H	—	—	2.5	2.3

Max. Protrusion of Auto Switch from Edge of Body: H

(mm)

Auto switch model	D-M9□V M9□VV	D-M9□AV
H	1.5	1.3

The auto switch will not protrude in the case of D-M9□.

MHR2, MDHR2/MHR3, MDHR3 Series

Made to Order: Individual Specifications

Please contact SMC for detailed dimensions, specifications, and delivery times.

1 Grease Change for Rotary Actuated Part

Symbol

-X32

As a measure against condensation, grease used for the rotary actuated part has been changed to SMC-GF1. The grease used for the finger part and cam part has not been changed. (GR-S is still used.)

How to Order

MHR2
MDHR2 — Standard part number — **X32**

Specifications

Grease	Fluorine grease (SMC-GF1)
Specifications/dimensions other than the above	Same as the standard type

Note) Do not use for lubrication.

MHR2, MDHR2/MHR3, MDHR3 Series Specific Product Precautions

Be sure to read this before handling the products. Refer to page 7 for safety instructions and pages 14 to 22 for air gripper and auto switch precautions.

Mounting Air Grippers/MHR2/MHR3

Mounting direction of each model is different. Refer to the table at right.

Model	Axial side mounting	Lateral mounting			Vertical mounting	
		A	B	C	D	E
MHR2-□	●	—	—	●	●	—
MHR3-□	●	—	—	—	—	—
MDHR2-□	●	●	—	—	●	—
MDHR3-□	●	●	●	—	—	●

Axial side mounting

Model	Applicable bolt	Max. tightening torque N·m	Max. screw-in depth Lmm	Positioning boss		
				Dmm	Hmm	
MHR	2 -10	M3 x 0.5	0.88	6	9H9 $\frac{0}{+0.016}$	1.5
	-15				12H9 $\frac{0}{+0.043}$	1.5
	2 -20	M4 x 0.7	2.1	8	14H9 $\frac{0}{+0.043}$	1.5
MDHR	3 -30	M5 x 0.8	4.3	10	16H9 $\frac{0}{+0.053}$	2
	-10	M3 x 0.5	0.88	6	9H9 $\frac{0}{+0.016}$	1
-15	12H9 $\frac{0}{+0.043}$				1.5	

Lateral mounting

Model	Applicable bolt	Max. tightening torque N·m	Max. screw-in depth Lmm	Positioning boss		
				Bore Depth dmm	Bore Depth hmm	
MHR	2 -10	M3 x 0.5	0.88	6	3 $\frac{+0.002}{0}$	6
	-15				4 $\frac{+0.002}{0}$	8
	2 -20	M4 x 0.7	2.1	8	4 $\frac{+0.002}{0}$	8
MDHR	3 -30	M5 x 0.8	4.3	10	5 $\frac{+0.002}{0}$	10
	-10	M3 x 0.5	0.88	6	3 $\frac{+0.002}{0}$	6
-15	4 $\frac{+0.002}{0}$				8	

Vertical mounting

Model	Applicable bolt	Max. tightening torque N·m	Max. screw-in depth Lmm	Positioning boss		
				Bore Depth dmm	Bore Depth hmm	
MHR	2 -10	M3 x 0.5	0.88	6	3 $\frac{+0.002}{0}$	6
	-15				4 $\frac{+0.002}{0}$	8
	2 -20	M4 x 0.7	2.1	8	4 $\frac{+0.002}{0}$	8
MDHR	3 -30	M5 x 0.8	4.3	10	5 $\frac{+0.002}{0}$	10
	-10	M3 x 0.5	0.88	6	3 $\frac{+0.002}{0}$	6
-15	4 $\frac{+0.002}{0}$				8	

How to Locate Finger and Attachment

- Positioning in the finger's open/close direction**
Position the finger and the attachment by inserting the finger's pin into the attachment's pin insertion hole. Provide the following pin insertion hole dimensions: shaft-basis fitting dimension C for the open/close direction; slotted hole with relief B for the cross direction.
- Positioning in the finger's cross direction**
Position the finger and the attachment by placing the finger's width into the attachment's finger insertion groove A.

How to Mount the Attachment to the Finger

- To mount the attachment to the finger, make sure to use a wrench to support the attachment so as not to apply undue strain on the finger.
- Refer to the table below for the proper tightening torque on the bolt used for securing the attachment to the finger.

Model	Applicable bolt	Max. tightening torque N·m	
MHR	2 -10	M3 x 0.5	0.59
	-15		
	2 -20	M4 x 0.7	2.8
MDHR	3 -30	M5 x 0.8	5.9
	-10	M3 x 0.5	0.59
-15	1.4		

Finger opening/closing speed: MHR2/MHR3

When the finger opening/closing speed is set as the total stroke of 0.2 seconds or more, it may cause the product to stick or completely stop its movement.

Operating Environment

Caution

Use caution for the anti-corrosiveness of the cross roller section.

Martensitic stainless steel is used for the finger guide, so make sure that anti-corrosiveness is inferior to the austenitic stainless steel.

In particular, watch for rust in environments where waterdrops are likely to adhere due to condensation.

Lubrication/MHR2, MHR3

Warning

This product should be used without lubrication. If it is lubricated, it could lead to sticking or slipping.
